PROFESSIONAL SUMMARY

QA Engineer with 7+ years of experience across SaaS, supply chain, and digital media, including 5+ years leading QA teams. Specialized in QA strategy, end-to-end test automation, and full release lifecycle management for web and mobile applications. Proven record of cutting regression testing time by 75% through automation and delivering enterprise releases with 95% test coverage.

PROFESSIONAL EXPERIENCE

QA Engineer Lead | PT Advotics Teknologi Global, South Jakarta, Indonesia

Jan 2021 – Present

Cloud-based SaaS ecosystem for supply chain management (WMS, DMS, ARM, Fleet Management) serving enterprise clients.

- Lead and mentor a team of 7 QA engineers, owning QA strategy and processes across enterprise web and mobile application suites.
- Architected end-to-end automation suites covering 51 critical features, improving regression stability and test coverage.
- Reduced manual regression testing time by 75% (from 4 hours to under 1 hour) through strategic implementation of automated test scripts.
- Achieved 95% test coverage on new feature releases by combining rigorous automated and manual testing protocols.
- Streamlined mobile release management by coordinating end-to-end APK deployments via Google Play Console with 100% review compliance.
- Performed root cause analysis by inspecting application logs and API network payloads to expedite issue resolution.
- Partnered with Product and Engineering leadership to review technical requirements and mitigate risks early in the SDLC.

QA Engineer (Freelance) | Narasi.tv, Jakarta, Indonesia

Mar 2024 – Mar 2025

Digital media and content streaming platform focused on high-traffic video delivery and user engagement.

- Joined during a legacy-to-new UI migration; executed end-to-end testing across web and mobile platforms to ensure feature parity and a stable transition.
- Delivered focused testing support during the high-traffic Jakarta regional election period, prioritizing stability of video streaming and user engagement features.
- Architected and implemented end-to-end automation suites covering critical features to improve regression efficiency and release stability.

- Authored monthly QA performance reports with analytical insights and recommendations for process and product improvements.

QA Engineer | PT Advotics Teknologi Global, South Jakarta, Indonesia

Oct 2019 – Dec 2020

- Developed and executed comprehensive test cases for web and mobile platforms using Katalon Studio and Selenium.
- Designed automated test scripts that reduced manual testing effort and accelerated release cycles.
- Identified, documented, and tracked defects in Jira, ensuring timely fixes and high product quality.

Senior Quality Assurance | PT Moladin Digital Indonesia, South Jakarta, Indonesia

Mar 2019 – Sep 2019

Automotive marketplace for end-to-end motorcycle transactions, financing, and dealer management.

- Managed the bug tracking process and worked closely with developers to resolve 100% of critical issues before product launches.
- Authored structured test documentation including test plans, test cases, and summary reports for management.
- Contributed to building the initial test automation framework for the core platform.

PROJECTS

SauceDemo E2E Automation | github.com/indrakuswara/saucedemo-automation

- Built a Playwright + TypeScript automation framework using the Page Object Model: 78 test cases (233 assertions) covering login, inventory, cart, checkout, and end-to-end purchase flows.
- Configured cross-browser execution (Chromium, Firefox, WebKit), tagged smoke/regression suites, and automated HTML reporting with email delivery, wired into GitHub Actions CI.

API Testing + k6 Performance | github.com/indrakuswara/api-testing-k6

- Built 28 Playwright + TypeScript functional API tests covering CRUD, end-to-end lifecycle, and contract/negative scenarios, with Zod response-schema validation and automatic test-data cleanup.
- Authored 5 k6 performance test scripts (smoke, load, spike, soak, stress) with safety guards preventing load tests from targeting the public demo API.
- Wired GitHub Actions CI to run the suite on every push and pull request, automatically emailing a styled HTML result report with per-test-case breakdown after each run.
- Documented a full test-case matrix mapping test IDs to requirements and expected results.

Deploy Validation Automation (Perpustakaan Shalawat) | github.com/indrakuswara/perpustakaan-shalawat

- Built a Playwright + TypeScript post-deploy smoke suite for a live Next.js/Vercel site that runs automatically on every successful production deployment through deployment_status events (manual dispatch as fallback).
- Runs full CRUD against production using uniquely-marked test data, published briefly, then deleted in the same run with layered cleanup, so production stays clean.
- Posts a per-test report to a hidden owner report page, with a screenshot for every test, pass or fail. Verified run: 26 tests, 22 passed, 0 failed, 20 screenshots uploaded.

SKILLS

- **Test Automation:** Playwright, Selenium, Katalon Studio
- **Performance Testing:** k6
- **API Testing:** Postman, REST API
- **CI/CD:** GitHub Actions
- **Web & Mobile Testing:** Android, iOS, Web platforms
- **Log Analysis & Debugging:** Firebase Crashlytics, Chucker, browser dev tools
- **Databases:** MySQL, SQLite, MongoDB
- **Test & Defect Management:** Jira, Trello, ClickUp
- **Methodologies:** Agile/Scrum, QA lifecycle management, test strategy & planning
- **Release Management:** Google Play Console deployments, regression suite optimization, test metrics & reporting

EDUCATION

Bachelor of Informatics Engineering | Gunadarma University, Depok, Indonesia

2012 – 2016
